## **DETAILED ACTION**

Page 2

## Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-16, drawn to a method, classified in class 427, subclass 446.
  - II. Claim 17, drawn to a method, classified in class 427, subclass 446.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that
- they are not disclosed as capable of use together and they have different designs, modes

of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different

inventions have different modes of operation, as Invention I requires the applied alloy

to develop a residual compressive stress not required by Invention II, and Invention II

requires the applied alloy to form a fracture toughness and hardness not required by

Invention I.

3. Because these inventions are independent or distinct for the reasons given above

and have acquired a separate status in the art because of their recognized divergent

subject matter, restriction for examination purposes as indicated is proper.

Application/Control Number: 10/816,094 Page 3

Art Unit: 1762

## Species

4. This application contains claims directed to the following patentably distinct species: In Invention I, two different sets of species are present. (a) different alloys are present (claims 7, 8 and 9) and (b) different methods of application are present (claims 10 and 11). The species are independent or distinct because as to the set of species (a) entirely different, non-overlapping alloys are required and as to the set of species (b) entirely different non-overlapping methods of application are required.

Applicant is required under 35 U.S.C. 121, if Invention I is elected, to elect a single disclosed species for prosecution on the merits from each of species sets (a) and (b) to which the claims shall be restricted if no generic claim is finally held to be allowable. For example, if Invention I is elected, applicant could elect claim 7 of species (a) and claim 10 of species (b). Currently, claims 1-6 and 1-16 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are

Art Unit: 1762

added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

5. A telephone call was not made to attorney S. Grossman to request an oral election to the above restriction requirement, because of the complexity of the restriction requirement with the election of inventions and species requirements as discussed above.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Art Unit: 1762

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Katherine A. Bareford whose telephone number is (571) 272-1413. The examiner can normally be reached on M-F(6:00-3:30) with the First Friday Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Timothy Meeks can be reached on (571) 272-1423. The fax phone numbers for the organization where this application or proceeding is assigned are (571) 273-8300 for regular communications and for After Final communications.

Other inquiries can be directed to the Tech Center 1700 telephone number at (571) 272-1700.

Furthermore, information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <a href="http://pair-direct.uspto.gov">http://pair-direct.uspto.gov</a>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
